## Earth Science 11: Custom Constellation Assignment

### Part 1

Close your eyes and make 4-7 dots on a black piece of paper. Try to not concentrate the dots in one tiny area, but don't spread them too far apart.

Open your eyes and look at your dots – see if you can find a constellation in there. Be creative! You don't have to use all of the dots if you don't want to. You might see more than one shape in your dots and that's ok too.

Draw the constellation you see by connecting the dots and fill in the shape. Colour and enhance your constellation (eyes, sword, tail, whatever makes sense).

### Part 2

Write a 200 word legend or story explaining how your constellation ended up in the stars. Was it an ancient warrior that was placed in the stars by a Roman Goddess to honour his accomplishments on the battlefield? Was it the prized possession of a lost child? Or maybe a bird that flew too high up in the sky? Whatever it is, tell me the story – have fun with it!

### Part 3

This assignment will be posted on your Unit 1 page of your ePortfolio. Under the title heading "*Custom Constellation*" I would like you to post a photo of your constellation (take a photo of your work with your phone, email it to yourself, and upload it as an image) and copy & paste your story under picture.
