

# Earth Science 11: ePortfolio

As part of Earth Science 11, you will create your very own ePortfolio to showcase your learning. You will be uploading assignments, reflecting on your work and documenting projects on your ePortfolio. **Remember to keep separate copies of your work (group or individual), and take pictures of any non-digital projects you complete so you can easily include them in your ePortfolio.** Any written work should be completed in a word processor (ex. Microsoft Word), NOT typed directly onto your ePortfolio.

You may choose whichever tool you would like to create your ePortfolio (Wix, Wordpress, Weebly, HTML). I am most familiar with Weebly, so if you are on the fence, I would steer you towards that one (it is really easy!)

The most important thing to keep in mind is that **your ePortfolio is a school project**. This is not your personal website. I would like for you to take pride in your ePortfolio, to make it your own and customize it, but it must always be **appropriate and professional**.

To get started, you could watch the *Intro to Weebly* video on my website, or view the support documents. OR, you could just dive right in. Pick your theme, URL and start creating! You do **not** need to pay for any features – please just use what is available to you for free.

Right now, I would like to you have the following elements in your ePortfolio\*:

- URL (*please email this to me as soon as you’ ve selected it*)
- Your name should be somewhere that easy for me to see. Please don’ t include contact information or anything personal. This is, after all, a public site.
- 7 standard web pages:
  - Home
  - Unit 1
  - Unit 2
  - Unit 3
  - Unit 4
  - Unit 5
  - This week in Earth Science
- 1 blog page titled “Reflections”

*\*As the course progresses, I may add to this list.*
